

Alber e-motion[®]

Power assist for wheelchairs

A manual wheelchair makes it possible to move around and promotes activity. For most wheelchair users it is often impossible to access all areas of everyday life - even with adequate physical strength. Slopes, kerbstones, thresholds regularly present insurmountable obstacles. The new **Alber e-motion** power assist allows wheelchair drivers to keep and even raise their level of active mobility, and provides a variety of therapeutic benefits.

Increasing personal freedom

Already slight force to the push rims engages the electromotors to help propel the wheelchair. The **Alber e-motion** is at its best particularly, when driving uphill or driving long distance. Thanks to **e-motion** the wheelchair can also be slowed down with very little effort. Just a slight checking of the push rims will do, and the electrical servo-brake effectively slows down the speed thus providing additional safety. The new Lithium-Ion batteries allow maximum range and thus independence for the **e-motion** user.

Therapeutic benefits

Most people experience arm pain and degeneration after prolonged manual wheelchair use. Shoulders and wrists are the most common areas for pain and repetitive strain injury. The **e-motion** helps to prevent such disorders by reducing the strain on joints and muscles and offering exercise at the same time because fitness is important for wheelchair user's mobility and cardio-respiratory health.

Adjustable

The sensitivity of the motors can be adjusted for the left or the right wheel independently. If required, this feature also allows the unequal arm strengths of a user to be balanced. If the user wishes to exercise more while propelling, the sensitivity can be simply reduced. **e-motion** with the optional ergonomic control system (ECS) offers a unique adjustablility: With the included new remote control the user can choose between two support levels and individually program 10 parameters of the **e-motion**.

Portable and versatile

Thanks to its quick-release system, the **e-motion** can be dismantled within seconds into very handy parts. The **e-motion** can be fitted to almost any manual wheelchair. Only small brackets have to be mounted on the chair in order to accommodate the **e-motion**. Existing manual wheels may be interchangeable with the **e-motion** drive wheel, allowing full manual operation of the wheelchair.

Options and Features

e·motion[®] ready for transport The compact and lightweight components are easy to transport.

Push-rim Using the push-rim activates the motors for assistance.

Batteries Latest Lithium-Ion technology provides excellent range and high durability. Removable for air travel.

Drive wheels Easy to detach from wheelchair, available in diameters 22" and 24".

Battery charger Automatic charger with indicator light.

Remote-control holder

Coated push-rim Providing enhanced grip.

Ergonomic Control System (ECS)

Rollback delay

(Optional)

The new ECS combines therapeutic bene?t with individual adjustment.

e-motion can be switched on and off from an upright sitting position using the remote control. In addition, two selectable power stages assure optimal driving convenience-precisely adapted to each user's personal mobility restriction and needs.
